

BRIGHTiNTEL

Product Sheet

Gain product shipment insight. Anytime. Anywhere

By collecting, structuring and analyzing logistics- and sensor-related data, we provide you with operational and strategic intelligence through the BRIGHTiNTEL platform, helping you to streamline and protect your products being shipped.

1. Connect

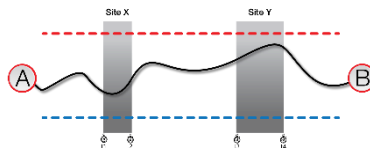

Connect your valuable product by equipping it with smart sensors that automatically, and continuously, register and transmit data en-route to its destination.

Depending on requirements different sensor devices can be applied, each device type having different sets of available sensors.

Products can be connected on all transport modes including air freight.

2. Ensure

When your product leaves its origin location make sure that it makes its way to the final destination on time and according to agreed handling.

Set up notifications to get direct alerts if anything is about to deviate, or has deviated from the defined shipment rules.

Review your product shipment in near real-time through the online, automatically compiled, shipment report.

3. Improve

Determine how to best ship your upcoming product shipments by being presented with actual data generated from all your historical connected shipments in the clearest possible way.

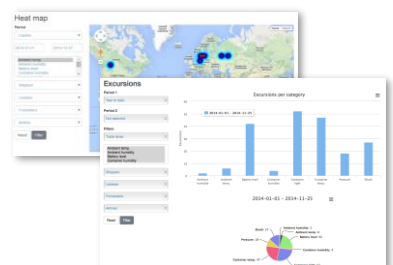

Interactive and user-friendly excursion and trade lane analyses enable you to determine your specific shipment risks based on different factors such as shock events, relative humidity and ambient temperature levels or unplanned delays.

Set up your analytics dashboard based on the performance indicators of highest importance to you and make smart decisions on objective and continuously collected shipment data.

Include sensors in report:

| | | | |
|--|-----|------|--|
| <input checked="" type="checkbox"/> Battery (%) | Low | High | <input checked="" type="checkbox"/> Air |
| <input checked="" type="checkbox"/> Light (lx) | | 10 | <input checked="" type="checkbox"/> Rail |
| <input checked="" type="checkbox"/> Pressure (kPa) | | | <input checked="" type="checkbox"/> Road |
| <input checked="" type="checkbox"/> Shock (g) | | 5 | <input checked="" type="checkbox"/> Sea |
| <input checked="" type="checkbox"/> Temperature (°C) | 2 | 8 | |

Specifications

BRiGHTiNTEL is a complete shipment insight platform providing three main layers;

- connected sensors attached directly to the product being shipped
- shipment reporting and notification services
- analytic services used to understand shipment-related issues on an aggregated level

The platform is configurable to any sensor or data logger format, thereby securing a future-proof solution. As your hardware evolves with more sensor capabilities, improve power management, etc., BRiGHTiNTEL evolves with it.

| | |
|---------------------------------------|---|
| Supported modes of transportation | Air, Rail, Road, Sea |
| Supported sensors | Position, Inside temperature, Outside temperature, Inside humidity, Outside humidity, Light, Shock, Pressure etc. |
| Supported shipment data for analytics | Multiple geofences with ETD and ETA, Product thresholds, Order Value, Product and Batch name/no., Carriers, Forwarders, Transportation costs etc. |
| Data communication | Cellular network transmissions, data integration manual data imports |
| Notification services | Web application, E-mail and/or SMS |
| Reporting services | Live interactive reports including charts and maps. Excursion highlights with timestamps and maps. PDF conversion included. |
| Analytic services | Trade lane analysis, Deviation analysis, Heat maps with drill down features to zoom in on specific shipments and shipment-related events or deviations. |

About us

10 years of global shipment experience

on all transportation modes

with 10000+ monitored shipments

We believe that the automated collection, visualization and processing of data from connected devices such as containers, vehicles and products during transportation contribute to more qualitative, effective and profitable operations for our customers.

By not only automatically and continuously monitoring products and assets, but also structuring and analysing the collected data, our solution BRiGHTiNTEL helps our customers to meet increased demands and to understand how products and assets are handled during transport.
